

Southern California's premier gaming organization (with 2,000+ slots + favorite table games and luxury hotel and outstanding restaurants) deploys Seceon aiSIEM Platform for Comprehensive Visibility, Proactive Threat Detections and auto Containment of threats in real-time.

As security breaches and hacks continue to lead global headlines, traditional solutions are no longer able to cope; even with nine security products deployed, our client did not have visibility of all the activities on their network, these multiple products generating multiple alerts sent them on a wild goose chase trying to understand what was happening. Their existing MSSP did not offer any actionable intelligence and had no automation capability. Sophisticated attackers and ransomware as a service offering poses a huge challenge for any organization. Due to the possible rewards, the gaming industry is a prime target for bad actors. One of the biggest challenges was trying to integrate nine siloed solutions from different OEMs, all of which created their own different IOCs and generated more noise than they could handle or missed major events all together.

Seceon's OTM Platform, with its ability to ingest raw logs and flows from various sources, including alerts from existing security products already deployed in the network, immediately provided our client with the visibility of all of their assets and their functionality and interactions in real time. It helped them detect some rogue applications and hosts, which were eliminated and improved their cybersecurity posture significantly within two weeks of deployment.

One of the differentiators for Seceon is the ability for automated or push button remediation. Seceon OTM has the ability to contain and eliminate threats in real-time, which is important to threat detection, not just detecting it but also stopping it! Most current security solutions lack this ability to automatically remediate a threat. Due to the ease of integration and correlation of different events a feature of the platform that the client relies on the most is Seceon's ability to bring together a variety of seemingly unrelated threat indicators to identify potential issues. "Seceon's machine learning capability has been key to reducing noise and ensuring that critical alerts get the attention they require," said VP of IT and Security for Premium Gaming Organization.

Another advantage of Seceon OTM is the ease of set-up. Premium Gaming Organization was able to fully set-up and start collecting data in less than a day! The major use-cases to be addressed were:

- Comprehensive Visibility
- Ransomware and Malware Detection in early stages
- Ability to detect various external and internal threats
- Automated Remediation of Threats and Breaches

Prior to Seceon aiSIEM, Premium Gaming Organization used nine traditional solutions and services from large market leaders, however it was always challenging to find a solution that could detect/cover between perimeter and endpoints to the required level of sophistication. The multi-layered approaches recommended by industry experts were rendered ineffective without proper integration between security solutions.

*"We are always focused on offering our customers the best experience and that requires us to deploy our applications and services without friction, but security and frictionless environment do not normally go hand in hand so when the Seceon platform was suggested we were sceptical and asked for a proof of concept. We were surprised to see its value within days of deployment," said VP of IT and Cybersecurity at Premium Gaming Organization. Our hunt for a next -gen security solutions had ended and after few months of operation, and seeing the value of ML and AI on telemetry connected from all forms of data were satisfied that we had the solution we required for now and the future. I even discussed the platform with my peer group in the industry. He continued, "despite evaluating a number of security solutions, including SIEM solutions and behavioural analysis solutions, we could not find any that can be brought together under one umbrella."*

*My Industry experience and evaluation of many cybersecurity products helped me realize the platform approach taken by Seceon is the right one and showed us what is possible with platform vs. silos/feature products*

*- VP of IT & Cybersecurity  
Premium Gaming Organization*

## Challenges:

- Traditional solutions and services from large vendors could neither combat the increasing sophistication of cyber threats nor could detect between perimeter and endpoints to the required level.
- The level of protection afforded by a siloed approach adds significant CAPEX and OPEX and never delivers the desired result and causes alert fatigue.
- Integration is the biggest challenge as point solutions from different OEMs are not built to communicate with each other.

## aiXDR Platform

MSS+MDR+XDR+SOC+Cloud Security+SaaS Security+Micro-Services Security

*“Seceon’s machine learning capability has been key to reducing noise and ensuring that critical alerts get the attention they require.”*

*IT and Cybersecurity Engineer  
Premium Gaming Organization*

### Solution:

- Analyzes all raw logs, Identity and network traffic, utilizes ML, AI and Dynamic Threat Models to provide “Continuous real-time Monitoring, proactive Detection and auto Stopping of threats and breaches”
- Single platform eliminating needs for silos like SIEM, UEBA, SOAR, NBAD, IDS, Threat Intelligence, ML and AI with actionable intelligence

### Benefits:

- Increases efficiency of personnel and security team by 89%
- Ease of set-up and integration is superior as it brings together variety of seemingly unrelated threat indicators to identify potential issues
- Ability to remediate (contain and eliminate) threats in real-time

## About Premium Gaming Organization

Step inside the doors and prepare to be whisked away from the every day and into an exciting world of sophistication, exhilaration and fun. This Southern California’s premier gaming organization, combines the thrill of 2,000+ slots and all your favorite table games with beautiful luxury hotel, many outstanding restaurants and unrivaled guest service. Break away from the ordinary and enjoy the best it has to offer as one of the finest Southern California casinos, including free entertainment nightly, spectacular views, expertly prepared meals, first-class amenities and so much more.
